

## 230V SYSTEM

The boat is equipped with a 230 V electrical circuit. In addition to the battery charger, the circuit also comprises sockets for 230 V consumers.

The shore socket is located in the cockpit and protected by electric switch located on rear wall over the ceiling in port aft cabin .

Main switch for water heating and sockets are located behind the backrest of skipper seat.

When the boat is connected to an external 230 V supply then red light is on.

**WARNING:** Before connecting the cable on the shore, connect it to the boat first.  
Disconnect the cable after use. First switch off the main switch in the boat, then disconnect the cable on the shore and last, disconnect it on the boat.  
Do not soak the catches of the cable in water.
