

230V SYSTEM

The boat is equipped with a 230 V electrical circuit. The shore socket is located on transom and protected by electric switch located in port aft cabin . In addition to the battery charger, the circuit also comprises sockets for 230 V consumers.

When the boat is connected to an external 230 V supply then green light is on.

Control panel for 230 V is located behind the shelf door in aft port cabin. Main switch for water heating , socets and battery charger are located on control panel.

WARNING: Before connecting the cable on the shore, connect it to the boat first.

Disconnect the cable after use. First switch off the main switch in the boat, then disconnect the cable on the shore and last, disconnect it on the boat.

Do not soak the catches of the cable in water.
