

14. Refrigeration

The system on this boat is an upgraded 12v refrigerator. This system is designed to run 24hrs a day if you wish. There is a top loading fridge unit with a small freezer compartment. You should not do two things:

- **Firstly, do not keep your refrigerations on if the batteries down less 12v. If the level goes below 12v the refrigerations must be off . Refer to section 7 for charging instructions.**
- **Secondly, do not chip at the ice or use any other sharp items in the fridge. If something is frozen to the fridge do not force it away. Warm water on it if you need to melt it away.**

There is a thermostat in the fridge. It is a white dial with numbers on it going from 1-7. Putting 7 at the apex of the dial is the coldest setting. Keep it on this setting until it is too cold. Then you can turn the system down or off if you wish.
